

U.S. Output per Hour Has Grown 17 Points More Than Canada's Since 2015

Output per hour, each indexed to its own 2015 average = 100

Notes: Canada: business-sector labour productivity (Table 36-10-0206, SA). U.S.: nonfarm business output per hour (BLS via FRED, OPHNFB). Sector definitions differ slightly; each series is indexed to its own 2015 average, so only growth is compared - not levels.
